✉ syyedmuzzamilshah6@gmail.com

<https://muzzamil-shah-portfolio.vercel.app/>

I specialize in designing and implementing robust, scalable applications by integrating both front-end and back-end technologies. With a strong foundation in building efficient user interfaces and modular components, I focus on creating seamless, responsive experiences that align with business goals and user needs. I collaborate closely with UI/UX designers and cross-functional teams to translate complex requirements into effective technical

Projects

1. Visa-Mex – Full-Stack Visa Application Management System

[Visit Website](#)

Description:

Visa-Mex is a modern web application designed to streamline the visa application process for both users and administrators. It enables applicants to submit various visa types online while providing admins with tools to manage applications, documents, and user data efficiently. Real-time Notifications – Email alerts sent via Node mailer. Admin Dashboard – Tools for reviewing and managing visa applications. Robust API – RESTful API built using Express.js and MongoDB.

Stack:

Frontend – React.js, Tailwind CSS

Backend – Node.js, Express.js

Database – MongoDB (Mongoose ORM)

Auth – JWT, Passport.js (Google/Facebook OAuth)

File Uploads – Multer + Cloudinary

OCR Integration – Google Cloud Vision API

Deployment – AWS EC2, S3

2. Xyress – Decentralized Web3 Platform

[Visit Website](#)

Description:

Xpress is a decentralized Web3 platform that bridges Web2 and Web3 with features such as blockchain exploration, secure digital wallets, password-less authentication, and AI-driven decentralization tools. It leverages a hybrid Bitpops consensus model to provide scalability, security, and fast transaction finality. The ecosystem is designed to make blockchain, AI, and metaverse adoption more accessible to mainstream users.

Stack:

Frontend – Next.js (responsive, optimized UI/UX)

Core – Web3, Blockchain, AI systems

Consensus Mechanism – PBFT + DPoS

Other – Scalable, metaverse-ready architecture

3. Makers Fund – Global Venture Capital Platform

[Visit Website](#)

Description:

A global venture capital platform empowering creators and innovators across the interactive entertainment and technology industries, with an emphasis on growth in Asia.

Stack:

Frontend – React.js, Next.js, Three.js (3D animations)

Backend – Node.js

Other – Responsive UI/UX, immersive digital experience

4. The DEBT Box – Crypto Meets Commodities

[Visit Website](#)

Description:

The DEBT Box is a decentralized platform where crypto meets commodities, offering blockchain-based solutions for asset-backed projects and digital mining opportunities. It enables users to participate in real-world, resource-backed ecosystems while promoting long-term sustainability and growth through innovative tokenomics. The platform features asset-backed tokens linked to real-world commodities, a fully decentralized ecosystem for secure participation, and an innovative digital mining model tied to sustainable resources. Additionally, it is designed for long-term growth, ensuring stability and adoption, with full blockchain integration that provides transparent and secure operations using Web3 technology.

Stack:

Frontend – React.js, Next.js

Core – Blockchain, Web3, Crypto Infrastructure

Other – Scalable and responsive UI

5. BidCaribbean (Lux Cars) – Real-Time Vehicle Auction Platform

[Visit Website](#)

Description:

Lux Cars is a full-stack vehicle auction platform built for users in the Bahamas and Turks and Caicos Islands, enabling real-time bidding on both imported and locally listed cars. The system integrates thousands of listings via a third-party API while also supporting secure local car listings after document verification. It features a dual auction system, fetching imported cars daily via third-party API and listing verified local cars for auction. Real-time bidding, powered by Pushers, takes place every Wednesday, supported by a bidding power system where users deposit funds to define their spending limits. Verified cars are auto-enrolled into live sessions, ensuring authenticity and smooth participation, while real-time communication delivers a fast and engaging auction experience.

Stack:

Frontend – React.js, Tailwind CSS

Backend – Node.js, Express.js

Database – PostgreSQL

State Management – Context API

Real-Time – PusherJS

Authentication – Custom secure verification logic

6. RFID SMRT POS – RFID-Powered Inventory & Sales Management System

[Visit Website](#)

Description:

A full-stack POS solution that leverages RFID for secure access, inventory tracking, and real-time sales reporting—built to optimize retail workflows. RFID-based authentication for staff accesses Real-time inventory tracking. Role-based access (Admin, Staff, Super Admin). Sales tracking with timestamped reports. Instant transaction alerts and logs. Scalable modular API architecture Tech Stack: Frontend – React.js, Tailwind CSS Backend – Node.js, Express.js Database – MongoDB (Mongoose) Authentication – JWT RFID Hardware – Arduino-based modules Deployment – Railway / LAN compatible.

Stack:

Frontend – React.js, Tailwind CSS
Backend – Node.js, Express.js
Database – MongoDB (Mongoose)
Authentication – JWT
RFID Hardware – Arduino-based modules
Deployment – Railway / LAN compatible

7. Noshly – Platform for Independent Chefs

[Visit Website](#)

Description:

A modern platform empowering independent chefs to host pop-up dining experiences, connect with local communities, and grow their personal brands. Chef onboarding and portfolio profiles. Pop-up event listings and discovery. Community engagement tools. Responsive and performance-optimized UI.

Stack:

Frontend – React.js + Next.js (SSR for SEO)
Backend – Node.js (REST APIs)
Database – MongoDB / PostgreSQL
Other – Scalable architecture, Awwwards-recognized design

Recognition:

Honorable Mention on Awwwards (Sep 2023) for creativity, usability, and design excellence.

8. Haletale – White-Label Property Management SaaS

[Visit Website](#)

Description:

Tenant and lease management. Rent collection and integrated payments. Maintenance request tracking. Financial analytics and reporting. White-label rebranding and multi-tenant support.

Stack:

Frontend – React.js + Next.js
Backend – Node.js (REST APIs)
Integrations – QuickBooks, Twilio, DocuSeal
Other – Scalable SaaS modules, responsive UI

9. Knect.ai – AI-Powered Learning Platform

[Visit Website](#)

Description:

An adaptive AI-driven learning system featuring virtual tutors that deliver personalized guidance using retrieval-augmented and knowledge-augmented generation. Always-available AI tutors. Personalized learning pace and focus. Context-aware, accurate explanations. Real-time web-based interaction.

Stack:

Core AI – RAG, KAG, Large Language Models (LLMs)
Data Layer – Vector databases for semantic retrieval
Platform – Web-based, real-time interaction

10. InfoDart – Real-Time Data Visualization Platform

A real-time data visualization system that identifies anomalies in live data streams and presents insights through intuitive dashboards. Real-time anomaly detection. Interactive and responsive dashboards. Scalable architecture for high-volume data. Collaborative cross-functional development

Stack:

Frontend – React.js
Backend – Node.js (real-time APIs)
Database – MongoDB

11. Reets – Machine Health Monitoring Dashboard

An industrial monitoring dashboard visualizing machine health parameters like vibration and frequency, with real-time alerts for predictive maintenance. Live monitoring of machine metrics. Graphical visualization and trend tracking. Automated alert system for threshold breaches. Reliable event-driven architecture (RabbitMQ)

Stack:

Frontend – React.js (interactive dashboards)
Backend – Express.js + WebSockets
Database – MySQL
Message Broker – RabbitMQ

Experience

02/2025 – 07/2025

MERN Stack Developer – Vosyn

Aiea, United States

Remote company focused on developing web applications

- Developed and maintained reusable and responsive UI components using React.js, Next.js, and Tailwind CSS
- Integrated dynamic API responses for secure authentication and session handling via NextAuth and JWT-based storage
- Implemented mobile-first layouts and adaptive navigation for seamless user experiences across devices
- Collaborated with backend developers to debug and resolve API integration issues and manage secure configurations
- Followed best practices in version control using Git and GitHub with structured, collaborative workflows

07/2022 – 01/2025

MERN Stack and AI Developer – Devminds Studio-LLC

United States, Sherman Oaks

Software development company focused on creating innovative solutions

- Integrate and develop new features while collaborating with the team to identify product and technical requirements
- Focus on building efficient, reusable front-end modules and constructing complex UIs
- Work closely with the design team to resolve challenging React, Next, Node, HTML and CSS issues

01/2021 - 06/2022

Backend Developer – Itifaq

Dubai, United Arab Emirates

Skills

Frontend:

HTML, CSS, JavaScript, TypeScript, React, Next.js, TailwindCSS, Bootstrap, React Router

Backend:

Node.js, Express.js, FastAPI, Python, SQL, MongoDB, JWT, Microservices, Modular Architecture

DevOps & Cloud:

AWS, S3, Vercel, Git, GitHub, CI/CD, DevOps

Tools & Integrations:

Postman, Stripe, RSA, Socket.IO, WebSockets

AI & LLM:

LangChain, Chatbot, LLM

Education

BS Software Engineering

COMSAT University Islamabad, Lahore Campus

FSC (Pre-Engineering)

Punjab Group of Colleges
